Climate Change Adaptation Training to Nepalese Businesses (CCANB) -2024

- **Semi formal program design**
- **Introduce yourself**
- **Background of the training event and content**
- **Objectives**
- **Engage the local government representative**

lalit@null.net

Background

- **Study on Business Perception:** USAID Biodiversity (Jal Jangal) conducted a study to assess the understanding of climate change among nature-based MSMEs, revealing that while larger enterprises are adapting, smaller businesses need assistance.
- **Sector-Specific Impacts:** Highlighted significant climate-related challenges in the NTFP and aquaculture sectors, including pest and disease issues and a decline in raw materials.
- **Business Roundtable Findings:** Identified climate change awareness, risk management skills, and the impact on natural resource-dependent businesses as Gap.
- **Training and Capacity Building:** Based on the findings, USAID Biodiversity (Jal Jangal) aims to enhance MSMEs' capacity.

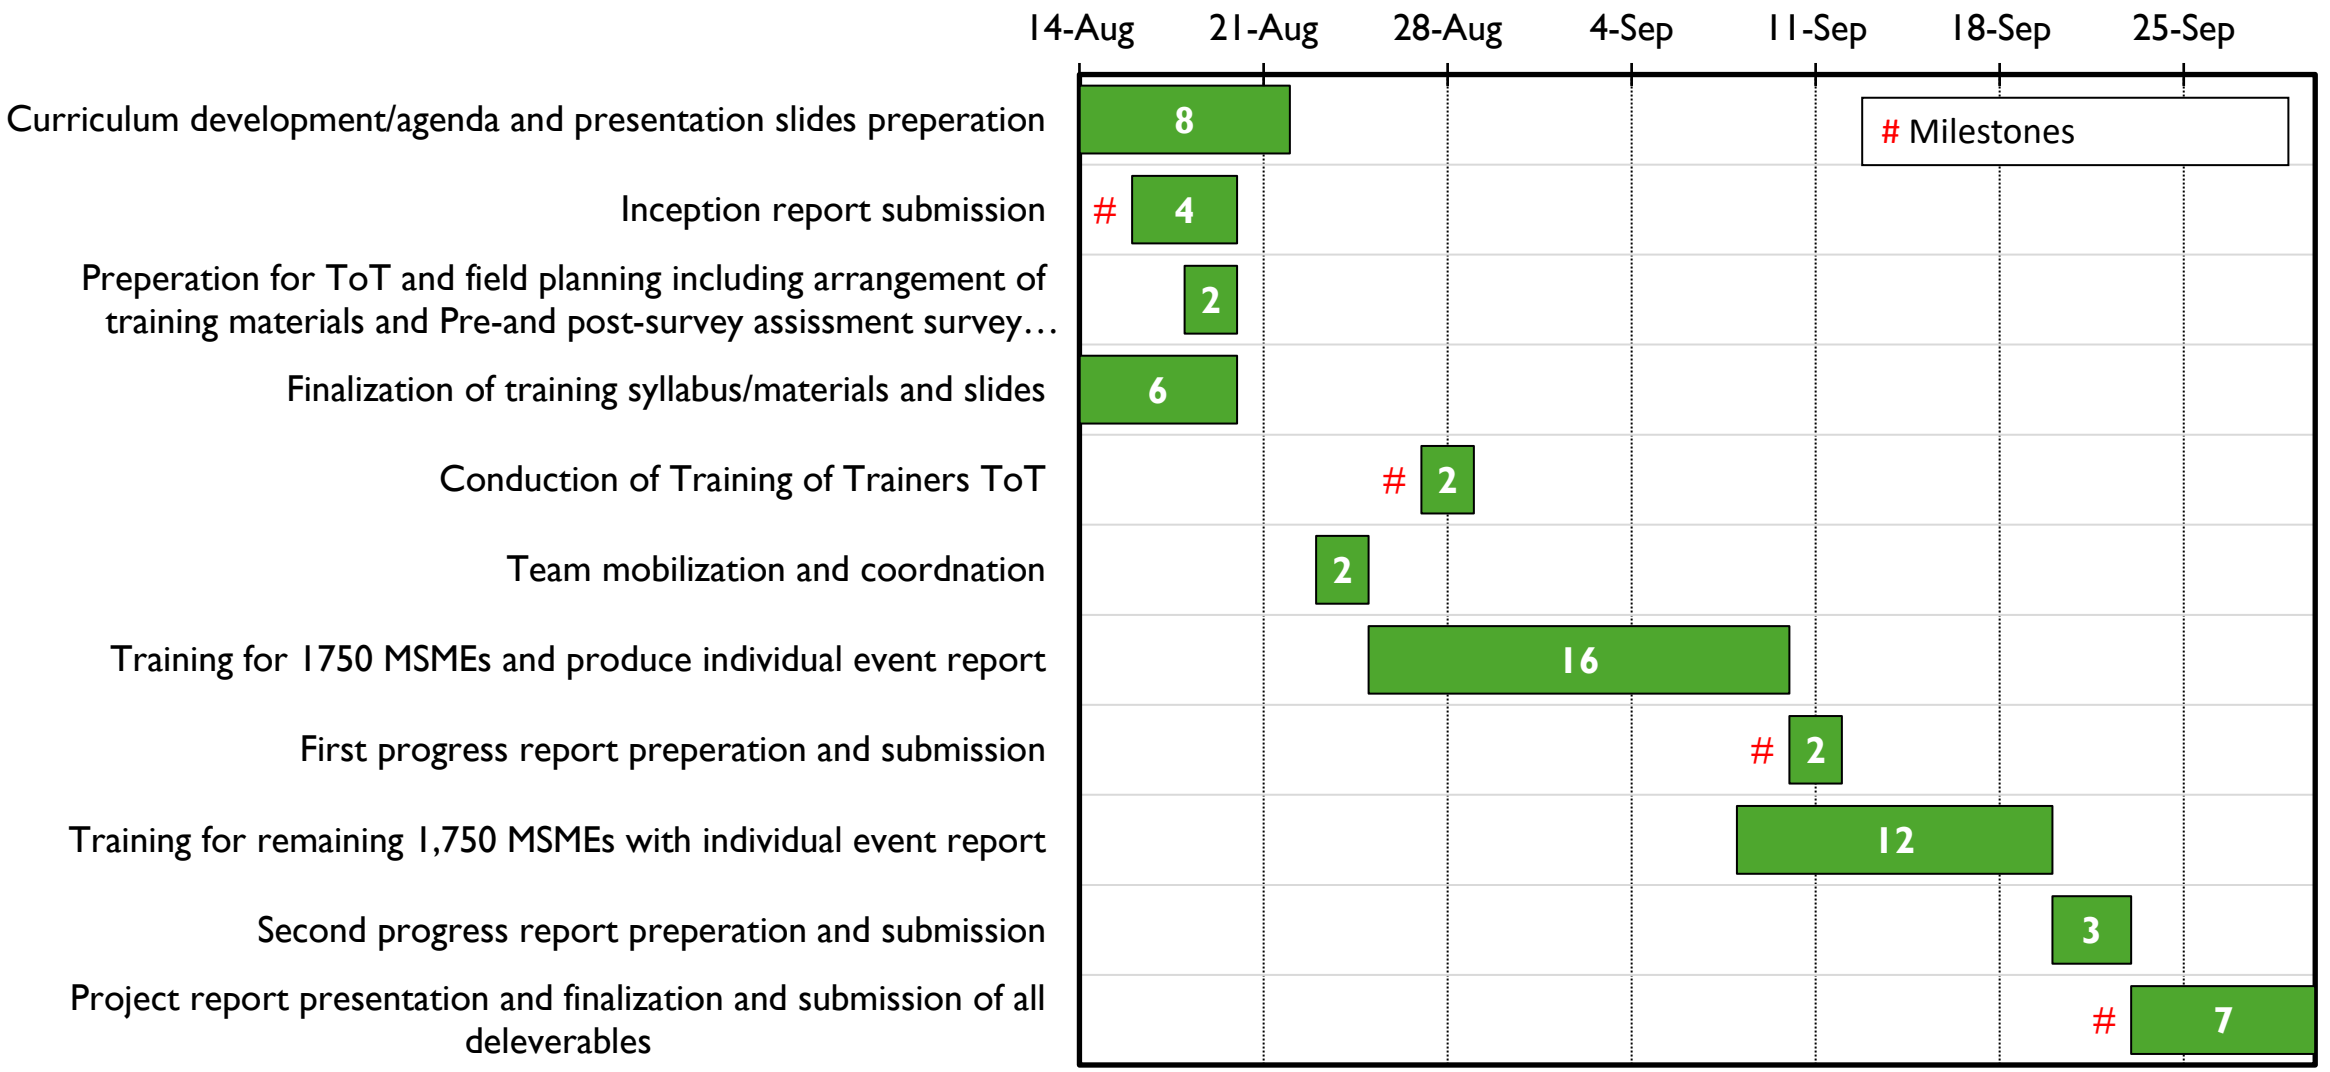

Objectives

The main objective is to strengthen the capacity of Nepalese businesses (mainly nature-based MSMEs) in climate change risk assessment and management, to enhance their business resilience against climate change.

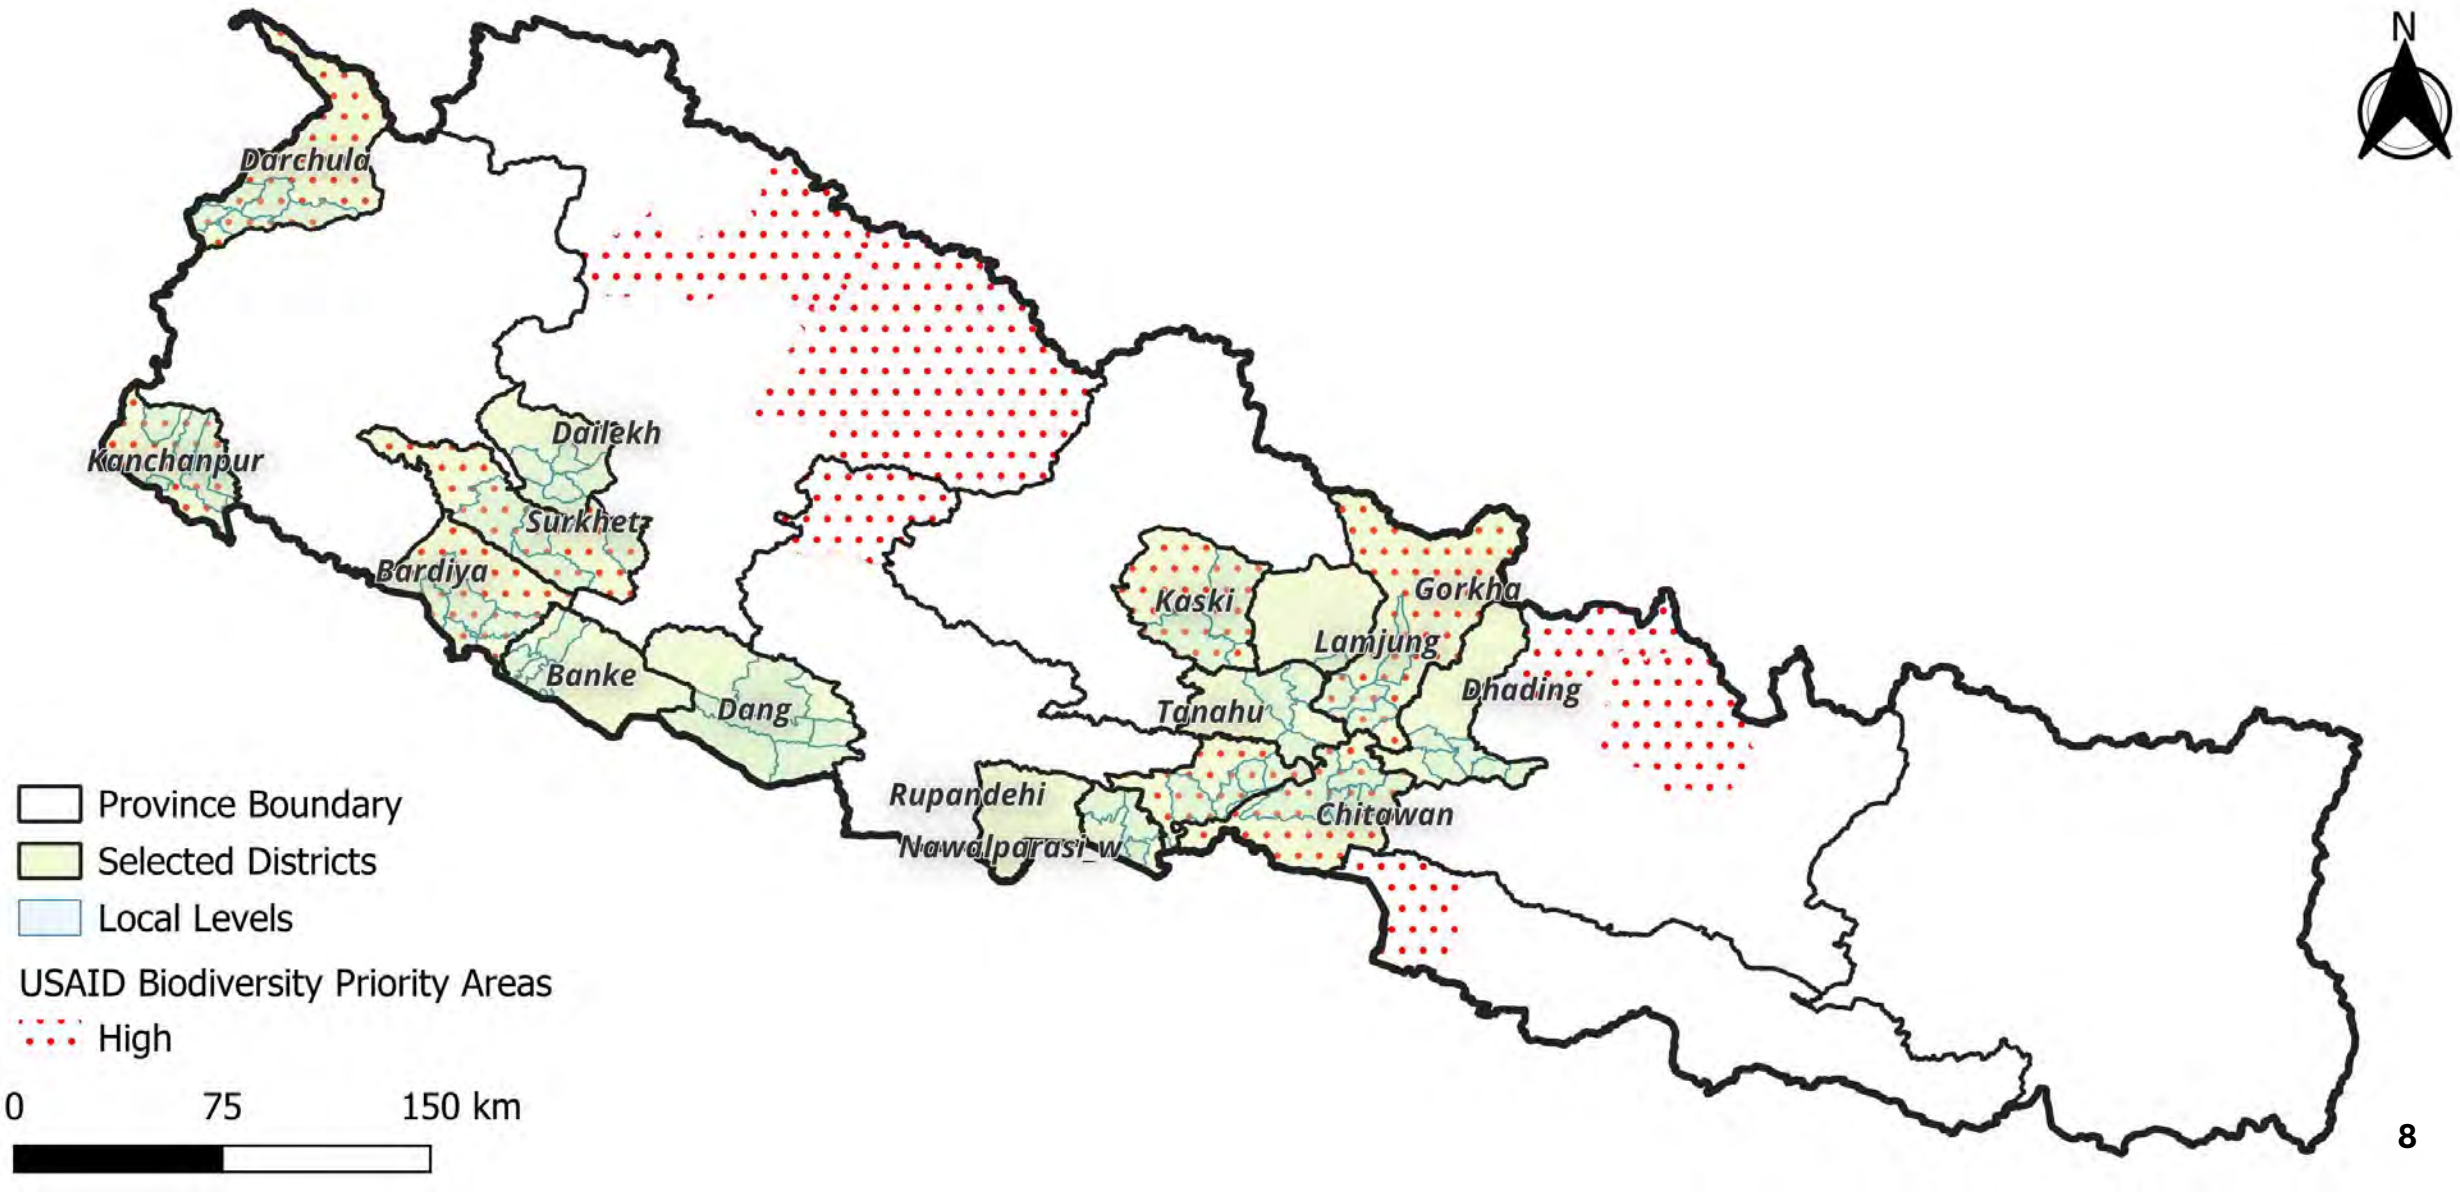

Specifically,

- Adapt a **training framework** that includes content on climate change, its impact, and climate change risk assessment and management in MSMEs.
- Conduct 2-day training for at least 3,500 MSMEs / businesses of Sudurpaschim, Lumbini, Karnali, Gandaki and Bagmati provinces in the USAID Biodiversity (Jal Jangal)'s priority l working areas. Prepare, publish, and distribute information and communication materials (leaflet) to the trainees. At least 60% of the training participants should be women and/or from marginalized groups.

Program Implementation Strategy

PMU

- Preparation of Training Curriculum
- Preparation of Training Manual and Contents
- Training of Trainers
- Coordination with Local Governments
- Report Writing and Reporting to USAID Biodiversity (Jal Jungle)

Logistic Officer

Logistic Planning and Arrangement

Lead and Co- Trainers

There will be 14 teams (1-Lead and 1- Co-trainer), each team will conduct 5 trainings per district and/or as per allocation

Data Entry Assistant

Organizing the field data collected by trainers and secondary sources along with timesheet management

Training Schedule

Time	Day 1: Understanding Climate Change and Impacts on MSMEs	Day 2: Practical Applications and Integration
10:00 AM – 10:30 AM	Registration and Welcome	Recap and Day 1 Review
10:30 AM – 11:30 AM	Module 1: Introduction to Climate Change (1 hours)	Module 5: Climate Resilient Products (1 hours)
11:30 AM – 12:30 AM	Module 2: Impacts of Climate Change on MSMEs and Impact Assessment Tools (1 hours)	Module 6: Case Studies Description (1 hours)
12:30 AM – 1:30 PM	Lunch Break	Lunch Break
1:30 PM – 3:00 PM	Module 3: Existing Situations and Adaptation Initiatives for MSMEs (1.5 hours)	Module 7: Local Issues and Discussion (1.5 hour)
3:00 PM – 3:15 PM	Short Break	Short Break
3:15 PM – 4:15 PM	Module 4: Adaptation Initiatives (Overall and Sector-wise) (1 hour)	Module 8: Group work and presentation (1 hour)
4:15 PM – 4: 45 PM	Wrap-Up and Closing	Wrap-Up and Closing

What Will We Provide?

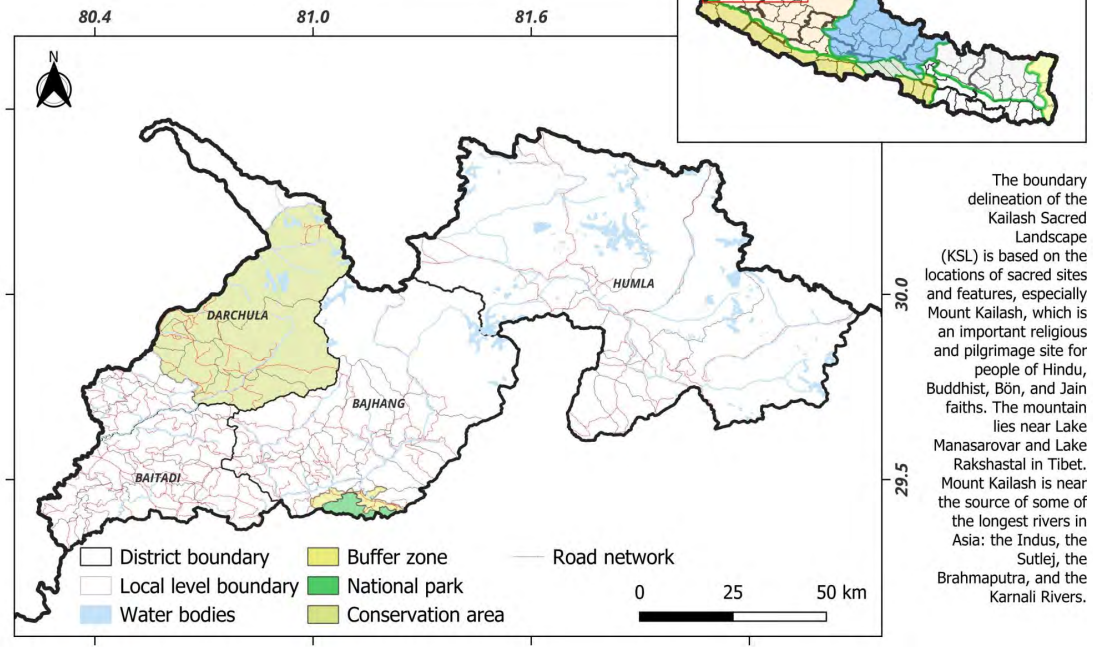

1. Training
2. Training Materials
3. Additional Reference Material
4. Real Time Guidance
5. Coordination
6. Field Allowance and Benefits as per Agreements.

What You Have to Provide?

1. Documentation of the Training Event: Date, location (including GPS), number and affiliation of trainees present, and any guidance provided by the Municipality at each training event.
2. The attendance list of training participants, as per provided format.
3. Answer Sheets of the Pre And Post Test Questionnaire (Digital or Hard Copies)
4. Minimum 6 Photographs (Action oriented) and a minimum 1-minute Video clip of Respective Two days showing the Training Process.
5. Standard formats of the 1) Record of Training Event, 2) Attendance List, 3) Test questions for pre- and post-tests (same question set), 4) Test Evaluation sheet, and 5) Training Report will be provided.

Kailash Sacred Landscpe (KSL)

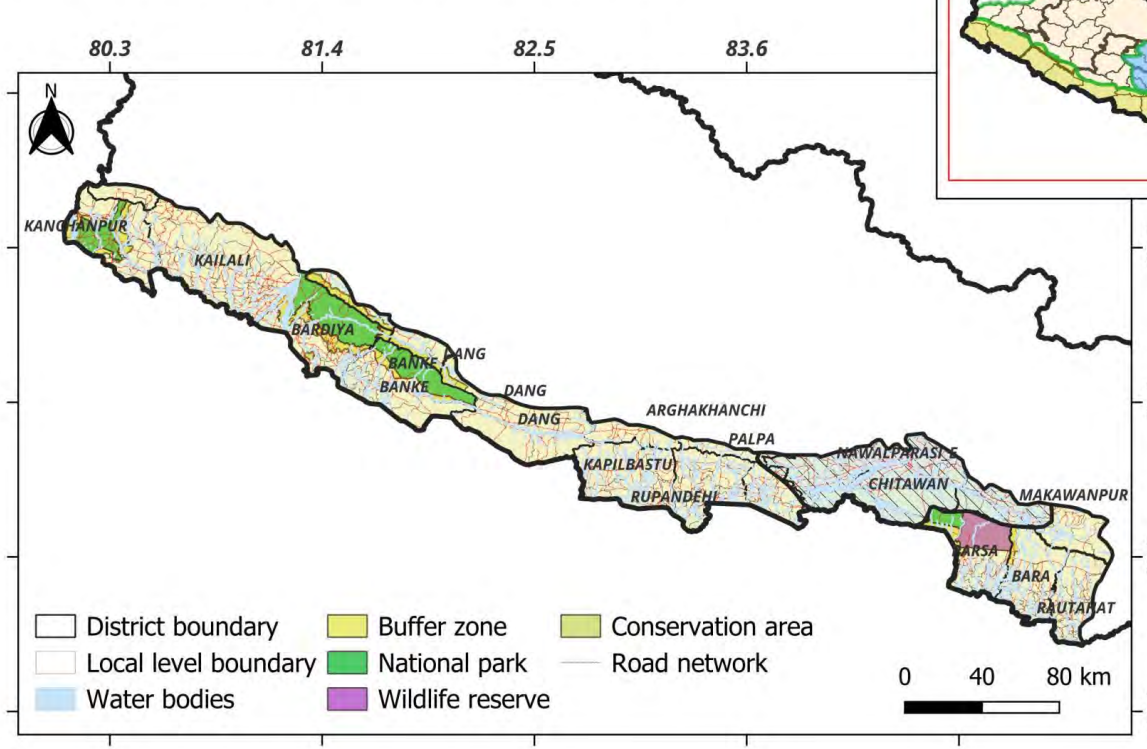

The boundary delineation of the Kailash Sacred Landscape (KSL) is based on the locations of sacred sites and features, especially Mount Kailash, which is an important religious and pilgrimage site for people of Hindu, Buddhist, Bön, and Jain faiths. The mountain lies near Lake Manasarovar and Lake Rakshastal in Tibet. Mount Kailash is near the source of some of the longest rivers in Asia: the Indus, the Sutlej, the Brahmaputra, and the Karnali Rivers.

Karnali Conservation Landscape (KCL proposed)

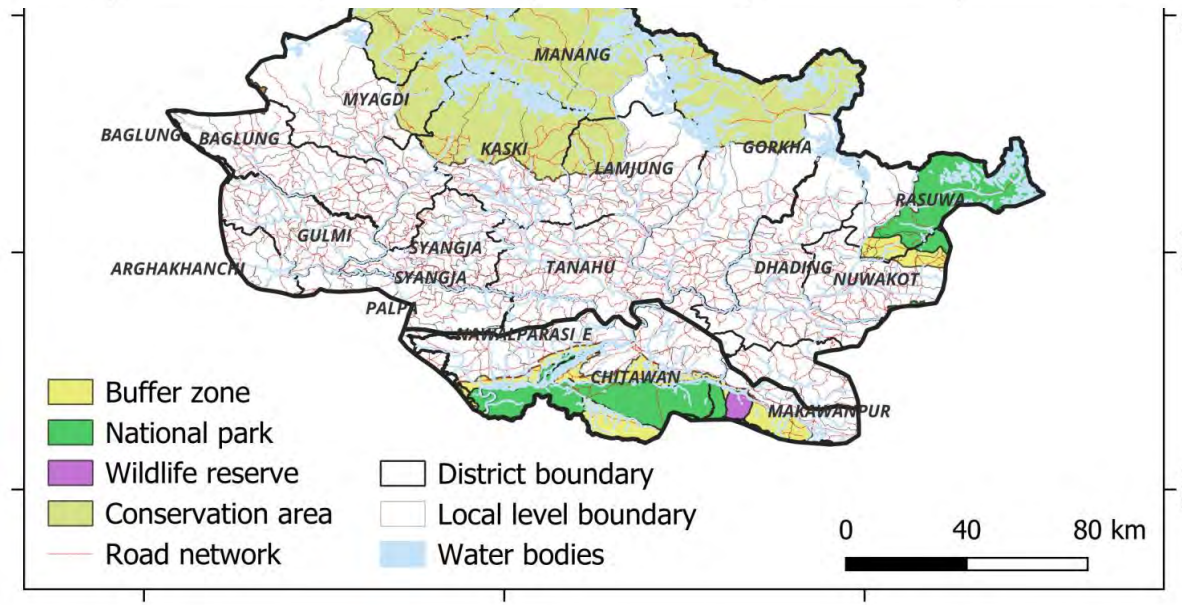

The Karnali Conservation Landscape (KCL) spans 31,471.42 km² across 15 districts in Nepal, coinciding with the Karnali river basin. It provides vital ecological connectivity between the upper Karnali basin and the Terai Arc Landscape (TAL), facilitating species movement and ecosystem processes. Key river corridors include the Seti, Bheri, Humla, Mugu Karnali, Tila, and Hima rivers, connecting Shey Phoksundo National Park, Rara National Park, Khaptad National Park, and the Dhorpatan Hunting Reserve, crucial for wildlife movement and climate change migration.

Terai Arc Landscape in Nepal (TAL-Nepal)

The Terai Arc Landscape in Nepal (TAL-Nepal) stretches between the Bagmati River in the east and the Mahakali in the west. The TAL -Nepal is globally renowned for its rich biodiversity, especially the charismatic mega – vertebrates such as the tiger and greater one-horned rhinoceros and is the first landscape-level initiative to conserve these species. It extends conservation strategies beyond the protected areas, moving towards managing large landscapes through participatory land use planning based on ecological social, and economic needs. It is a transboundary landscape covering India and Nepal and TAL-Nepal covers an area of 24,710.13 km2.

Nepal covers 32,068 km², linking Chitwan National Park in the south with Annapurna Conservation Area, Manaslu Conservation Area, and Langtang National Park in the north. It includes the Gandaki river basin and borders the Sacred Himalayan Landscape to the east, slightly overlapping with the Terai Arc Landscape (TAL) in the south. CHAL is drained by eight major rivers and encompasses all or part of six protected areas.

THANK YOU

FOR YOUR ATTENTION
